AP CS Final Project Proposal

Proposal Idea:

- Create a working version of the game Connect 4.
- Uses X's and O's in order to represent the pieces of each player.
- Will use a 2d String array in order to represent the board, which will be printed after every turn.
- Will start with the classic 6 x 7 Connect4 board. If time allows, we will try to change parameters such as board dimensions and ConnectX to “funify” the game even more.
